	Applicable Fees	mechanisms, such as Proof of Authority (PoA),
		Practical Byzantine Fault Tolerance (PBFT),
		Byzantine Agreement (BA) or similar mechanisms,
		secure the network through a predefined set of
		validators who are trusted to validate transactions
		and add blocks to the ledger. Unlike open networks
		where anyone can participate (as in Proof-of-Work or Proof-of-Stake), BFT and similar mechanisms
		operate with known and vetted participants, often
		selected by a governing entity. Validators are
		incentivized to maintain the network's integrity
		through monetary rewards or external motivations,
		such as institutional trust or regulatory obligations.
		Malicious actions, such as submitting invalid
		transactions or failing to participate in consensus,
		can result in penalties, removal from the validator
		set, or other repercussions, creating an economic
		and reputational deterrent to dishonest behavior.
		Validators reach consensus by verifying
		transactions and proposing blocks, and, as long as
		a majority of validators act honestly, the network remains secure.
